

UNOPERCULATED

Meaning: Unoperculated refers to organisms, such as larvae or spores, that lack a covering or lid (operculum), which may affect their development or dispersal mechanisms.

1. The unoperculated larvae require specific environmental conditions to thrive.
2. In botany, unoperculated spores are often adapted for wind dispersal.
3. The unoperculated species of fish were noted for their unique breeding habits.
4. Unoperculated forms of certain mollusks exhibit fascinating adaptations to their habitats.
5. Researchers studied the unoperculated developmental stages of various marine organisms.
