

UNSATURATED

Meaning: Unsaturated refers to a chemical state in which a compound, such as a fat or solution, contains less than the maximum possible amount of solute or hydrogen atoms, allowing for additional bonding or solute to be dissolved.

1. Unsaturated fats are often considered healthier than saturated fats for heart health.
2. The chemist explained that an unsaturated solution has the capacity to dissolve more solute.
3. In environmental science, unsaturated zones refer to areas where the soil is not fully saturated with water.
4. The garden soil remained unsaturated after the light rain, allowing for better drainage.
5. Unsaturated colors in a painting can create a vibrant and dynamic visual effect.
