

URANUS

Meaning: Uranus is the seventh planet from the Sun in the solar system, characterized by its blue-green color from methane in its atmosphere and an extreme axial tilt.

1. Uranus is known for its unique blue-green color due to the presence of methane in its atmosphere.
2. The planet Uranus rotates on its side, making its axial tilt the most extreme of all the planets in our solar system.
3. Astronomers have discovered numerous moons orbiting Uranus, with Titania being the largest among them.
4. Voyager 2 remains the only spacecraft to have visited Uranus, providing invaluable data about its rings and atmosphere.
5. The discovery of Uranus in 1781 expanded our understanding of the solar system and challenged previous astronomical theories.
