

URETHROPLASTY

Meaning: Urethroplasty is a surgical procedure aimed at repairing or reconstructing the urethra, typically to treat urethral strictures.

1. Urethroplasty is often recommended for patients with severe urethral strictures.
2. The success rate of urethroplasty can vary depending on the length and location of the stricture.
3. After undergoing urethroplasty, many patients experience significant improvements in urinary function.
4. Surgeons typically prefer urethroplasty over other procedures when dealing with complex urethral injuries.
5. Post-operative care following urethroplasty is crucial to ensure proper healing and prevent complications.
