UROPYGIAL

Meaning: Uropygial refers to a gland located near the base of a bird's tail that secretes oils used for waterproofing feathers.

1. The uropygial gland produces oils that help waterproof a bird's feathers.
2. Birds use their beaks to spread the secretion from the uropygial gland during grooming.
3. Many species of birds have a large uropygial gland that varies in size depending on their habitat.
4. The uropygial gland is located near the base of the tail in most avian species.
5. Some researchers study the composition of uropygial oils to understand their role in avian health.
