

UVULATOMY

Meaning: Uvulotomy is a surgical procedure that involves the removal of the uvula to treat conditions such as sleep apnea or chronic snoring.

1. The surgeon explained that a uvulotomy might be necessary to alleviate the patient's severe sleep apnea.
2. After the uvulotomy, the patient experienced significant relief from their chronic snoring issues.
3. Complications from a uvulotomy are rare, but patients should still be informed of potential risks.
4. The doctor recommended uvulotomy as a last resort after other treatment options failed.
5. Following the uvulotomy, the patient's recovery was swift, with minimal discomfort reported.
