

VARIABLE

Meaning: A variable is a factor or element that can change or vary, often used in contexts such as scientific measurements or programming to represent different values.

1. The amount of rainfall is a crucial variable in determining crop yields.
2. In programming, a variable can hold different values at different times.
3. Scientists must control every variable in their experiments to ensure accurate results.
4. The price of oil is a variable that affects the global economy significantly.
5. She found it challenging to predict how each variable would impact the final outcome.
