

VENTRICLE

Meaning: Ventricle: a hollow part or cavity in the heart that pumps blood, specifically referring to one of the two lower chambers (left and right) of the heart.

1. The heart has four chambers, including the left and right ventricle.
2. During the medical examination, the doctor noted an enlargement of the patient's left ventricle.
3. In a healthy heart, the ventricle pumps oxygen-rich blood to the body.
4. The right ventricle is responsible for sending deoxygenated blood to the lungs for oxygenation.
5. Electrocardiograms can help identify irregularities in the function of the ventricles.
