

VERTEBRO

Meaning: Vertebro refers to a vertebra, specifically one of the individual bones that make up the spine, often considered in medical contexts such as surgery or treatment for spinal conditions.

1. The vertebro was carefully examined during the surgical procedure.
2. Researchers studied the effects of vertebroplasty on patients with spinal fractures.
3. He felt a sharp pain in his back, indicating a problem with his vertebro.
4. In the anatomy lab, we learned about the structure and function of the vertebro.
5. The vertebro played a crucial role in supporting the spine's overall stability.
