

VIRUS

Meaning: Virus: A harmful program or code that replicates itself and spreads to disrupt computer systems, or a microscopic infectious agent that can replicate only inside the living cells of an organism.

1. The computer virus spread rapidly through the network, causing significant damage.
2. Scientists are working tirelessly to develop a vaccine that can combat the new virus.
3. Infectious diseases often begin with a single virus that multiplies within the host.
4. The news reported an outbreak of a dangerous virus in several major cities.
5. Maintaining strong cybersecurity measures is essential to protect against potential virus attacks.
