

VIVISECTIONIST

Meaning: A vivisectionist is a researcher or scientist who conducts experiments on live animals to study their physiological responses for medical research purposes.

1. The vivisectionist meticulously recorded every detail of the animal's physiological response during the experiment.
2. Despite the ethical debates surrounding his work, the vivisectionist remained committed to advancing medical research.
3. Many animal rights activists protested against the vivisectionist's laboratory, arguing for the humane treatment of all creatures.
4. The vivisectionist faced severe backlash from the community after a documentary exposed questionable practices in his research.
5. In her research paper, she described the vivisectionist's methods as both groundbreaking and controversial within the scientific community.
