

# VIVISECTOR

*Meaning: A vivisector is a scientist or researcher who conducts experiments on living organisms, often involving dissection or surgical procedures, typically for research purposes.*

1. The vivisector carefully adjusted the microscope to examine the tissue sample.
2. Ethical concerns have led to a decline in the number of vivisectors in modern laboratories.
3. Many animal rights activists protest outside facilities where vivisectors conduct their experiments.
4. The vivisector's findings provided crucial insights into the effects of the new drug.
5. Historically, vivisectors faced significant scrutiny for their methods and the treatment of their subjects.
