

WASTEWEIR

Meaning: A wasteweer is a structure designed to manage and divert excess water, typically from a reservoir or waterway, to prevent overflow or flooding.

1. The engineers installed a wasteweer to efficiently manage excess water from the reservoir.
2. During the storm, the wasteweer overflowed, diverting floodwaters away from the nearby town.
3. Regular maintenance of the wasteweer is essential to ensure its proper functioning and prevent blockages.
4. The design of the wasteweer allows for a controlled release of water, minimizing environmental impact.
5. After the heavy rains, the wasteweer played a crucial role in protecting the downstream ecosystem.
