

WHIPWORM

Meaning: Whipworm is a type of parasitic roundworm (Trichuris trichiura) that infects the intestines of humans and other animals, often causing gastrointestinal issues, particularly in areas with inadequate sanitation.

1. Whipworm infections are commonly found in areas with poor sanitation.
2. The whipworm's long, slender body resembles a whip, which is how it got its name.
3. Children are particularly susceptible to whipworm infestations due to their playful habits.
4. Treatment for whipworm typically involves antiparasitic medications to eliminate the worms.
5. Preventing whipworm infection includes practicing good hygiene and regular handwashing.
