

WIND-FERTILIZED

Meaning: Wind-fertilized refers to plants that achieve fertilization through the transfer of pollen by wind rather than by pollinators.

1. Wind-fertilized plants can thrive in areas with limited pollinator activity.
2. The unique adaptation of wind-fertilized species allows them to reproduce successfully in open environments.
3. Farmers are increasingly interested in wind-fertilized crops for their resilience to changing climates.
4. Ecologists study wind-fertilized ecosystems to understand their role in biodiversity.
5. The discovery of wind-fertilized flowers has changed our understanding of plant reproduction methods.
