

# WINDPIPE

*Meaning: Windpipe: the tube in the respiratory system that carries air from the throat to the lungs.*

1. The windpipe serves as a crucial passage for air to travel from the throat to the lungs.
2. When the windpipe becomes inflamed, it can lead to difficulties in breathing.
3. Doctors often examine the windpipe during procedures to diagnose respiratory conditions.
4. A foreign object lodged in the windpipe can cause serious health complications.
5. Understanding the structure of the windpipe is essential for medical students studying anatomy.
