

ZIRCONA

Meaning: Zircona refers to a synthetic material, specifically zirconium dioxide, often used in jewelry as a cost-effective substitute for diamonds and in dentistry for its durability in crowns and implants.

1. Zircona is often used as a more affordable alternative to diamonds in jewelry.
2. The durability of zirconia makes it a popular choice for dental crowns and implants.
3. With its brilliant sparkle, zirconia can closely mimic the appearance of natural gemstones.
4. Many artisans appreciate zirconia for its versatility in various types of craftwork.
5. The introduction of zirconia in the market has revolutionized the way people view synthetic stones.
