

# ZIRCONIA

*Meaning: Zirconia is a synthetic crystalline material, primarily zirconium dioxide, valued for its strength, aesthetic qualities, and use in dental and jewelry applications as a diamond substitute.*

1. Zirconia is often used in dental applications due to its strength and aesthetic appeal.
2. The manufacturer claimed that their new jewelry line features high-quality zirconia instead of diamonds.
3. In recent years, zirconia has gained popularity in the construction industry for its durability and resistance to wear.
4. Scientists are exploring the use of zirconia in fuel cell technology for more efficient energy production.
5. The brilliant shine of cubic zirconia makes it a popular choice for costume jewelry.
