

ZONULAR

Meaning: Zonular refers to the fibrous strands that connect the ciliary body to the lens of the eye, helping to maintain its shape and position.

1. The zonular fibers play a crucial role in maintaining the shape of the lens in the eye.
2. A disruption in the zonular support can lead to lens dislocation and vision problems.
3. During the eye examination, the ophthalmologist assessed the condition of the zonular apparatus.
4. Zonular glaucoma often requires specialized treatment to manage intraocular pressure effectively.
5. Research into zonular dynamics can provide insights into age-related ocular changes.
