

ZOOECIUM

Meaning: Zooecium: A protective, often calcareous, structure that houses the individual polyps of bryozoans.

1. The zooecium serves as a protective housing for the polyps of bryozoans.
2. In the study of marine biology, understanding the structure of a zooecium is crucial.
3. Each zooecium is formed from a secretion of the organism, often resembling tiny chambers.
4. Researchers observed that the zooecium can vary significantly in shape and size among different species.
5. The fossilized remains of ancient bryozoans often include well-preserved zooecia, providing insight into their evolution.
