

# ZOOID

*Meaning: A zooid is an individual member of a colonial organism that functions as part of a larger colony.*

1. A zooid is a single individual member of a colonial organism, such as a bryozoan.
2. In some species of corals, each zooid plays a specific role within the larger colony.
3. The fascinating structure of a zooid allows for specialized functions, contributing to the overall health of the colony.
4. Researchers study the behavior of zooids to gain insights into the evolution of colonial life forms.
5. Each zooid in a siphonophore can perform different tasks, working together like a complex machine.
6. The biologist explained that a zooid is an individual animal within a colonial organism.
7. In the study of marine life, the term 'zooid' often refers to the specialized members of a colony, like polyps or medusae.
8. Each zooid in the coral reef contributes to the overall health and structure of the colony.
9. Researchers observed how each zooid functions independently while still being part of a larger communal system.
10. Understanding the role of each zooid can provide insights into the evolution of complex life forms.
